

MATB42: Assignment #7

1. (a) Find an equation of the tangent plane to the surface  $S$  defined parametrically by  $\Phi(u, v) = (u^2 + v, v, u + v^2)$  at the point  $(9, 0, 3)$ .

$$v = 0 \qquad u + v^2 = 3 \implies u = 3$$

$$\phi_u = (2(3), 0, 1)$$

$$\phi_v = (1, 1, 2(0))$$

$$\phi_u \times \phi_v = (-1, 1, 6)$$

So the tangent plane can be given by

$$0 = ((x - 9, y, z - 3) \cdot (-1, 1, 6))$$

$$0 = (9 - x + y + 6z - 18)$$

$$9 = -x + y + 6z$$

- (b) Use symbolic algebra software to sketch the surface  $S$  and its tangent plane from part (a).

2. Use a surface integral to find the area of the triangle in  $\mathbb{R}^3$  with vertices  $(1, 1, 0)$ ,  $(1, 2, 1)$  and  $(3, 3, 2)$ .
3. Calculate the surface area of the piece of the cone  $x^2 + y^2 - z^2 = 0$  which lies outside the cylinder  $x^2 + y^2 = 4$ .

4. (a) Find the area of the portion of the unit sphere that is cut out by the cone  $z = \sqrt{x^2 + y^2}$ .  
(cf. page 391, #10)
- (b) Find the area of the portion of the cone  $z = \sqrt{x^2 + y^2}$  that is cut out by the unit sphere.
5. Let  $\Phi : D \subset \mathbb{R}^2 \rightarrow \mathbb{R}^3$  be a parametrization of a 2-dim surface  $S$  in  $\mathbb{R}^3$ .

(a) Set

$$E = \|\phi_u\|^2, \quad F = \phi_u \cdot \phi_v, \quad G = \|\phi_v\|^2,$$

Show that the surface area of  $S$  is

$$A(S) = \iint_D \sqrt{EG - F^2} dA$$

$$\begin{aligned} \iint_D \sqrt{EG - F^2} dA &= \iint_D \sqrt{\|\phi_u\|^2 \|\phi_v\|^2 - (\phi_u \cdot \phi_v)^2} dA \\ &= \iint_D \sqrt{(\|\phi_u\| \|\phi_v\|)^2 - (\|\phi_u\| \|\phi_v\| \cos \theta)^2} dA \quad \text{Where } \theta \text{ is the angle between } \phi_u \text{ and } \phi_v. \\ &= \iint_D \sqrt{(\|\phi_u\| \|\phi_v\|)^2 (1 - \cos^2 \theta)} dA \\ &= \iint_D \sqrt{(\|\phi_u\| \|\phi_v\|)^2 (\sin^2 \theta)} dA \\ &= \iint_D \sqrt{\|\phi_u \times \phi_v\|^2} dA \\ &= \iint_D \|\phi_u \times \phi_v\| dA \\ &= \int_{\Phi} 1 dS \end{aligned}$$

- (b) What does the formula for  $A(S)$  become if the vectors  $\phi_u$  and  $\phi_v$  are orthogonal?  
If the vectors are orthogonal, then the dot product is 0, so the equation reduces to

$$A(S) = \iint_D \|\phi_u\| \|\phi_v\| dA$$

- (c) Use parts (a) and (b) to compute the surface area of a sphere of radius  $a$ .

$$\begin{aligned} \Phi(\theta, \varphi) &= a(\cos \theta \sin \varphi, \sin \theta \sin \varphi, \cos \varphi) \\ \phi_\theta &= a(-\sin \theta \sin \varphi, \cos \theta \sin \varphi, 0) \\ \phi_\varphi &= a(\cos \theta \cos \varphi, \sin \theta \cos \varphi, -\sin \varphi) \\ \|\phi_\theta\| &= a \sin \varphi \\ \|\phi_\varphi\| &= a \\ \implies A(S) &= a \int_0^{2\pi} \int_0^\pi \sin \varphi d\varphi d\theta \\ &= \int_0^{2\pi} \left[ -\cos \varphi \right]_0^\pi d\theta \\ &= \int_0^{2\pi} -(-1 - 1) d\theta \\ &= 2 \int_0^{2\pi} 1 d\theta \\ &= 4\pi \end{aligned}$$

(cf. Marsden & Tromba, page 399, # 23.)

6. For each of the following surfaces  $S$ , sketch  $S$  (using symbolic software) and evaluate the surface integral  $\int_S f \, dS$ , where  $f(x, y, z) = x$ .
- (a)  $S$  is that part of the surface  $y = 4 - x^2$  between  $z = 0$  and  $z = 1$ , with  $y \geq 0$ .
  - (b)  $S$  is the upper half of the unit sphere centered at the origin.
  - (c)  $S$  is that part of the surface  $x = \sin y$  with  $0 \leq y \leq \pi$  and  $0 \leq z \leq 2$ .
7. Find the mass of the metallic surface  $S$  given by  $z = 1 - \frac{x^2 + y^2}{2}$  with  $0 \leq x \leq 1$ ,  $0 \leq y \leq 1$ , if the mass density at  $(x, y, z) \in S$  is given by  $m(x, y, z) = xy$ .
