2. Let  $\omega$  be a k-form and let  $\eta$  be a  $\ell$ -form. Find  $d(d\omega \wedge \eta - \omega \wedge d\eta)$ .

3. Determine if  $\eta = y\,dx\,dy + dz\,dy\,dz - yz\,dz\,dx$  is exact. If  $\eta$  is exact find a 1-form  $\omega$  with  $d\omega = \eta$ . (compare with page 461, # 22)

4. Evaluate  $\iint_S \omega$ , where  $\omega = z \, dx \, dy + x \, dy \, dz + y \, dz \, dx$  and S is the unit sphere, directly and by the Divergence Theorem.

(page 489, #12)

5. Compute  $\int_S \omega$  and use symbolic algebra software to sketch S in each of the following.

- (a)  $\omega = xz \, dx \, dy + x^2 \, dy \, dz + dy \, dz \, dx$ S is the upper hemisphere  $x^2 + y^2 + z^2 = 4$ ,  $z \ge 0$  with  $\boldsymbol{n}$  pointing upward.
- (b)  $\omega = z \, dx \, dy + x \, dy \, dz + y \, dz \, dx$ S is the part of the plane x + y + z = 1 which lies in the first octant oriented by the unit normal which points upward.
- (c)  $\omega = xz \, dx \, dy + y \, dx \, dz + z^2 \, dy \, dz$ S is the part of the cone  $z = \sqrt{x^2 + y^2}$  between z = 1 and z = 3, oriented by the unit normal with negative z-component.
- (d)  $\omega = z \, dx \, dy + y \, dy \, dz$ S is the oriented surface given by the parametrization  $\Phi(u, v) = (u + v, uv^2, u^2 + v^2), \ 0 \le u \le 1, \ 0 \le v \le 1.$

- 6. Verify Stokes' theorem by direct calculation of both sides when the surface S is the piece of the paraboloid  $z=x^2+y^2-4$  with  $z\leq 0$ , oriented by the downward pointing unit normal, and  $\omega=(2y-z)\,dx+(x+y^2-z)\,dy+(4y-3x)\,dz$ .
  - As part of your solution, provide a sketch showing the appropriate orientations. (For this question you may draw the skwtch by hand or use symbolic algebra software.)

- 7. Let  $\omega = yz dx xz dy + xy dz$  and let  $\gamma(t) = (2\cos t, 2\sin t, 4), 0 \le t \le 2\pi$ .
  - (a) Let S be the piece of the surface  $z = x^2 + y^2$  with  $z \le 4$ . Use Stokes' theorem to give an integral over S which is equivalent to  $\int_{\gamma} \omega$ . Verify by directly computing both integrals.
  - (b) Let S' be the part of the plane z=4 with  $x^2+y^2\leq 4$ . Use Stokes' theorem to give an integral over S' which is equivalent to  $\int_{\gamma}\omega$ . Verify by direct computation.
  - (c) Can you give another explanation as to why the integrals you get over S and S' should have the same value?

8. Let  $\mathbf{F}(x,y,z) = (e^{z^2}, 4z - y, 8x \sin y)$ . Find  $\int_S (\nabla \times \mathbf{F}) \cdot d\mathbf{S}$  where S is the unit sphere oriented with the outward normal.

- 9. (a) Marsden & Tromba, page 451, # 13.
  - (b) Marsden & Tromba, page 451, # 15.
  - (c) Use symbolic algebra software to sketch the surfaces in parts (a) and (b).

- 10. (a) Let F and G be vector fields on  $\mathbb{R}^3$  and let  $f: \mathbb{R}^3 \to \mathbb{R}$ . Verify the following identities.
  - (i)  $\operatorname{div}(\mathbf{F} \times \mathbf{G}) = \mathbf{G} \cdot \operatorname{curl} \mathbf{F} \mathbf{F} \cdot \operatorname{curl} \mathbf{G}$ .
  - (ii)  $\operatorname{curl}(f\mathbf{F}) = f \operatorname{curl} \mathbf{F} + (\operatorname{grad} f) \times \mathbf{F}$ .
  - (b) Let R be a closed region in  $\mathbb{R}^3$  with boundary  $\partial R$ . Prove the identity

$$\int_{\partial R} (\boldsymbol{F} \times \operatorname{curl} \boldsymbol{G}) \cdot d\boldsymbol{S} = \int_{R} (\operatorname{curl} \boldsymbol{F}) \cdot (\operatorname{curl} \boldsymbol{G}) \, dV - \int_{R} \boldsymbol{F} \cdot \operatorname{curl} (\operatorname{curl} \boldsymbol{G}) \, dV$$
